Grades and Skill Levels Served

Designed primarily for grades 3 through 8. K-12 placements may be accepted with approval when readiness, schedule, fit, and capacity allow. Accepted students participate in curriculum and coursework aligned to their current academic readiness, demonstrated skill level, and student plan rather than age alone.

Students may participate in elementary, middle school, or high school level curriculum components depending on readiness, placement, and the student plan. Students are placed through mixed-age, teacher-guided placement according to ability level, readiness, family goals, available sections, and program fit.

A student's specific curriculum level is confirmed during placement and reflected in the student plan. Live sections, schedule options, and approved placements may vary by readiness, capacity, available staffing, and program fit.

Educational Model

AIA is a full-time, tuition-bearing private school program. Instruction is required and provided across at least three instructional days each week.

AIA is designed to serve as the student's primary school program and provides the majority of the student's academic instruction through teacher-directed self paced coursework, adaptive learning systems, regular live interactive components, progress monitoring, and parent communication. AIA instructors and staff direct and monitor the academic program; instruction is not required from the student's parent or guardian.

Subjects and Curriculum Areas

Full-time students participate in:

- Math
- Language Arts
- Integrated History and Science
- One exploratory elective course area

Math, Language Arts, and Integrated History and Science continue across the full school year. The exploratory elective course area is made up of shorter unit study or project based classes that change during the school year.

AIA maintains at least two exploratory elective options for selection. Exploratory offerings, unit topics, and project classes may vary by student plan, readiness, available sections, and program capacity. Each AIA course includes self paced work and a regular live interactive component.

Curriculum is teacher directed and may include licensed online curriculum resources, adaptive software systems, assigned readings, written work, projects, teacher-created materials, live class activities, and other resources selected by AIA for the student plan in conjunction with family goals.

Coursework is generally aligned to the student's current grade or skill range and is adjusted by teacher review, student progress, and family goals. The program supports steady academic development and flexible pacing rather than a single fixed grade track for every student.

Services Provided

AIA provides:

- placement review and student plan setup
- teacher-directed coursework and assignments
- regular live interactive components for AIA courses
- self paced work through AIA-designated learning tools
- progress monitoring and teacher review
- curriculum access, required materials, and AIA LMS access
- school-issued student accounts, email, or web services when assigned
- parent tools and teacher communication
- school-issued technology, including a managed laptop or equivalent device as assigned
- optional clubs, onboarding activities, and other school activities when designated by AIA
